INNOVATING THE INDUSTRY STANDARDS OF TOMORROW

Modern Flames introduces the FusionFire™ Steam Fireplace, the next step in the company's revolutionary line of innovative fireplace products. Modern Flames harness the power of commercial steam flame technology seen in the likes of Disney and Universal Studios with its revolutionary FusionFire™ Steam Fireplace. The FusionFire™ Steam Fireplace was designed to handle the rigors of everyday use and consumes extremely small amounts of water when running. Because it is safe to the touch and uses clean steam energy, no clearance is required for builders or homeowners. Requiring only 120v electricity, home builders struggling to install gas fireplaces that meet the rigid parameters of modern green building codes and the new "Net Zero" requirements should look no further than the FusionFire™ Steam Fireplace. Featuring the most life-like flame ever developed, this steam-based unit is the first fireplace on the market that provides the consumer with the best aspects of both gas and electric, opening the door for a host of residential and commercial applications.

The FusionFire™ Steam Fireplace features a glistening glass chip media ember bed as the standard media option. Upgrade your look with the elegant driftwood log set & river stone accents and finish off the firebox with decadent ledge stone back brick. This full featured look will result in timeless viewing entertainment. Own the steam electric fireplace that is changing an industry.
